

***Glock Extended Magazine Release:
Small frame (9mm and .40) and
Large frame (10mm and .45) Glock pistols***

Parts Included:

- Mag button frame
- Button
- One (1) 4-40 x 3/8" flat head cap screw

***CAUTION: REMOVE MAGAZINE AND VISUALLY CHECK CHAMBER
TO MAKE SURE THAT FIREARM IS UNLOADED.***

Using the blade of a small screwdriver, capture the magazine release spring and pull it out of the release, being careful not to damage the magazine release channel. The original magazine release will then slide out of the frame. Insert the drilled and tapped JP Glock Extended Magazine Release into the Glock frame. Reengage the spring and install the magazine button on the JP magazine catch using a thread locker on the screw.

As a Glock owner, you may be interested in our Glock Trigger Enhancement service. This is a series of modifications that we perform to your Glock to give a nearly single-action trigger feel with a clean, short break and minimal overtravel and short reset. The difference will be night and day and will allow you to have much better trigger control resulting in improved accuracy and speed. Our turn-around time on this service is only two weeks.

THANKS FOR YOUR BUSINESS!
