

Installation instructions
JPA-RB JPoint Riser Block
riser block for AR15 and other rifle applications
(also fits Tasco Optima and Fire Point sights)

**CAUTION! REMOVE MAGAZINE AND VISUALLY CHECK CHAMBER
TO MAKE SURE THAT FIREARM IS UNLOADED.**

This mounting adapter is made to fit on top of the Weaver adapter to give additional height. It is necessary for AR15 flat top applications and other rifle applications where stock comb height requires a higher mounting point.

Using the metric screws supplied with the original Weaver adapter, attach the riser block to the Weaver adapter. Then using the 6x32 button heads supplied with the JP adapter, secure the JPoint to the top of the adapter. Now the entire assembly can be installed on the firearm.

THANKS FOR YOUR BUSINESS!!

Other JP adapters for the JPoint:

(Also compatible with Tasco Optima or Fire Point sights)

Rifles/Shotguns

JPA-TANSN: Trijicon TA01NSN
JPA-TAS: Mounting to Trijicon eye piece (used with JPA-TANSN)
