CUSTOM LASERMARK GUIDE

Ver. 09122019

This guide includes instructions and advice on how to prepare and submit your personalized lasermark design to us. On the

subsequent pages, you'll find diagrams with measurements of the magazine well areas of our receiver models to assist in planning.

DESIGN FORMAT AND SUBMISSION

TEXT :

If your custom mark is text only, please specify:

1. Font
2. Font size (in points)
3. Font style (bold, italics, etc.)
4. Horizontal/vertical scale (if not 100%).

Include an example of how the final mark should appear. If the font you are using is non-standard, you may be asked to send the font file.

IMAGES/LOGOS :

For images or logos, submitting a vector file (.ai or vector .pdf) is preferred and will not incur additional charges. We can also work from a raster file (.jpg, .png, .bmp, .pdf or other image file) if the included design is clear and distinct but an art generation charge of \$25-50 will apply depending on the quality of the image.

As a guideline for raster artwork, the original object should be 300 pixels per inch (PPI) minimum at the size you wish it to be on your receiver.

Any design needs to be binary in nature, i.e. black and white with no grayscale/shading. If you're not sure if your design will work, think of it this way: if it wouldn't work for a one-color rubber stamp, it won't work as a lasermark. We can work from color images but will have to render them in black and white.

✗ GREYSCALE

✓ BINARY

Also, due to size and resolution constraints, a design with very fine detail will not mark well.

Too Much Detail

Just Right

You will be contacted regarding any potential problems with your design prior to us beginning work on it.

PROOF APPROVAL

A digital rendering of the final lasermark can be sent for your approval at no cost. Beyond this, two proof options are available:

PHOTO PROOF :

We will mark a physical sample of your design and send you a high-resolution photo to let you see the final appearance. This is available for \$20.

PHYSICAL PROOF :

We will mark a physical sample of your design and mail it to you for your approval. This is available for \$30.
